Bio

IT support professional with experience in system administration, technical troubleshooting, and secure configuration across enterprise environments, including managing endpoint compliance and configuration through Microsoft Intune. I maintain a dedicated Linux-focused homelab where I deploy and refine virtualization platforms, storage systems, and containerized services to build practical, infrastructure-oriented skills. This hands-on work complements my professional background supporting users, resolving technical incidents, and supporting large-scale endpoint environments. I bring a structured, reliability-focused approach to infrastructure and aim to contribute these skills to projects while continuing to grow as an engineer.

EXPERIENCE

HP inc, Irving, TX

Jan 2025 - Present

Field Technical Support Technician

- Resolves L2 Incident escalations, troubleshooting system issues and ensuring compliance for user endpoints.
- Manages, configures, and supports enterprise endpoints using Microsoft Intune and Windows 365, ensuring secure and compliant systems for 5,000+ devices.
- Collaborates with team leaders to build and escalate L2 IT support tickets to the IT Security, Application, and Engineering groups.
- Manages IT assets securely across their lifecycle, including sanitization and decommissioning.

Teksystems, Irving, TX

Apr 2023 - Jan 2025

Desktop Support Technician (Contingent)

- Led in-office help desk operations for corporate staff, delivering prompt and effective support to maintain productivity.
- Led weekly new-hire onboarding: Creating passwords and security questions, securing access to provisioned equipment, and ensuring that their computers fall in compliance with banking application standards.
- Translated initial incident reports into detailed, actionable support tickets for L2 teams, ensuring accurate documentation and efficient issue escalation.

Viapath Technologies, Grand Prairie, TX

Oct 2021 - Nov 2022

Server Technician (Contingent)

- Assembled and configured servers (Dell, HP, SuperMicro) for production deployments in correctional facilities.
- Applied firmware updates and network configurations on routers and switches to maintain system compliance and integration.
- Assisted cross-department teams to ensure project milestones were met during high-demand periods.

Target, Fort Worth, TX

May 2021 - Oct 2021

Technology Team Member

- Assisted customers with device selection, setup, and troubleshooting for mobile/IoT products.
- Delivered technical support to reduce returns and improve customer satisfaction.

PROJECTS

- **Proxmox Linux Virtualization Server:** Managed virtualization infrastructure hosting multiple services and VMs for home lab experimentation and learning.
- **Network Attached Storage (NAS):** Configured and maintained a TrueNAS server, delivering scalable cloud and local storage solutions for secure data access and backup.
- **Home Media Server:** Deployed Jellyfin media server within Docker containers, enabling authenticated users to stream local media content seamlessly.
- **Local DNS and Ad Blocking:** Implemented AdGuard DNS server to provide network-wide DNS resolution and ad blocking, enhancing privacy and network performance.

EDUCATION

CompTIA Security+ Sy0-701, Euless, TX

Sep. 2025

Tarrant County College, Hurst, TX

2021

- Completed coursework in programming, networking, and systems administration.
